

Advanced Technician Degree in Aviation (TSA)

Ecole Nationale de l'Aviation Civile

[Advanced Technician Degree in Aviation \(TSA\)](#)

Team leader, station manager, aerodrome controller, airline quality auditor...: Technician Training Aviation (TSA in French) opens access to a number of professions for a varied and exciting career in civil aviation.

TSA public servant

You can exercise very diversified functions in all services of DGAC (the French Civil Aviation Authority):

- Air traffic control in many airports, studies and development of air traffic procedures, aeronautical information, etc. (Air Navigation Services Directorate)
- Inspection and supervision of air navigation areas, air transport, airports, general aviation, flight personnel licensing, safety, environment, etc. (Safety of Civil Aviation Directorate)
- Research Analyst, IT, logistics, training, etc. (All services and departments of the DGAC) or even the Bureau of Investigations and Analyses for Civil Aviation Security, reporting directly to the Ministry of Transport

TSA in private sector

TSA in private sector allows to access careers in structures such as airport management companies or airlines.

In these companies, you can exercise very varied responsibilities or functions which lead you, for example, to participate in operational studies in the airport sector (use of airport runways, aircraft operating conditions), to work in an operating department of an airline or in an airline ground handling company.

TSA classes are entirely taught in French.
